

# Effort System Overview

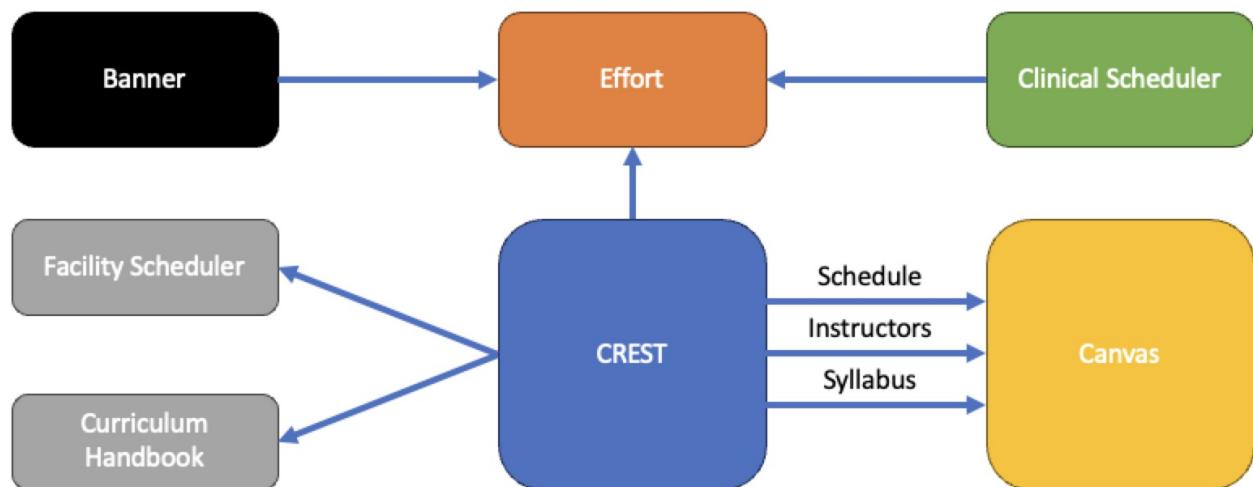

Last Modified on 10/27/2023 4:11 pm PDT

The “Effort System” contains the student teaching contact hours for all members of the school. For faculty, it is used to produce the teaching activity records for merit and promotion.

The system currently pulls data from three databases: CREST (the School curriculum database), Banner (the campus course system), and the Clinical Scheduler. Course leaders are encouraged to update CREST data so that accuracy in the effort system requires minimal change.

Banner only stores unitage, enrollment and course leader information so other instructors and individual teaching effort will need to be added. If an instructor teaches in a course that originates outside the school then that course will need to be added to the instructor's teaching. If the course is not in the drop down list, then it can be imported using the course import tool.

Please see the help topics on the left for additional information.
